

Main industry segments

Materials handling, paper and packaging

Belt applications

Pick-n-place transports, electronic assembly equipment, small parts conveying, inserting systems, carton making and filling lines

Description

Trapezoid teeth with a 40° tooth angle are spaced on 5 mm centers.

Transparent thermoplastic polyurethane with 88 Shore A protects the steel tensile member and allows smooth handling of any kind of goods. Our TPU provides good resistance to oils and solvents and withstands UV radiation well.

The tooth and conveying sides of the belt are faced with antistatic fabric. HabaSYNC antistatic timing belts are in full compliance with ISO 9563.

Sketch of basic shape according to DIN 7721

Belt data

Belt width, nominal		Admissible tensile force, open belt		Admissible tensile force, joined belt		Tensile force for 1% elongation		Mass of belt (belt weight)	
mm	inch	N	lbf	N	lbf	N	lbf	kg/m	lb/ft
16	0.63	540	121	270	61	1350	303	0.04	0.03
25	0.98	840	189	420	94	2100	472	0.06	0.04

Belt width (max 150 mm / 6 inch): Possible **cutting widths** are multiples of the nominal belt width.

Minimum **number of teeth** of joined belt: 180

Minimum **length of joined belt**: 900 mm (35.4 inch)

Temperature range of matrix material: -20 to 70 °C (-4 to 150 °F)

The tensile force for 1% elongation (k1% static) per unit of width determines the stress-strain behavior of the belt. It defines the resulting strain if a certain stress is applied and vice versa. This value corresponds to the belt without joint.

The admissible tensile force of a running belt is defined by the strength of the joint or by the strength of the belt without joint. Habasit defines an admissible belt force (without joint) for all belts, which always corresponds to a belt elongation of 0.4%. Joined belts are calculated with half admissible force. Please contact Habasit for detailed information and calculations.

All data are approximate values under **standard climatic conditions**: 23 °C / 73 °F, 50% relative humidity (DIN 50005 / ISO 554), and are based on the Master Joining Method.

Belt options

Description		ØA		n _A	ØB		n _B
		mm	inch		mm	inch	
Tooth side: antistatic fabric	A	30	1.18	15	30	1.18	12
Conveying side: antistatic fabric	A						

For **detailed material properties** (e.g. coefficient of friction, colors, etc) please contact your Habasit representative.

A = with counter flection

B = without counter flection
